

Building an agency website requires careful planning to make sure it looks professional, is easy to navigate, and clearly communicates your value.

Here are detailed suggestions for your agency website's design style, required pages, and key design elements for products/services and the contact page.

Overall Design Style & Aesthetic

A modern agency website should project **trust, expertise, and creativity**.

- **Style: Minimalist and Clean.** This style is highly professional and lets your work shine. Avoid clutter, excessive animations, or overly busy backgrounds.
 - **Color Palette:**
 - **Primary/Accent:** Choose **one vibrant color** (e.g., a deep teal, electric blue, or a bright coral) to use sparingly for calls-to-action (CTAs), highlights, and navigation links.
 - **Neutral/Base:** Use **white** or **light gray** as the dominant background color for maximum readability and a clean look.
 - **Text:** Use **black** or a very dark gray for body text.
 - **Typography:** Use a maximum of two font families.
 - **Headings:** A modern, bold **Sans-serif** (e.g., Montserrat, Poppins) to convey impact.
 - **Body Text:** A highly readable, clean **Sans-serif** (e.g., Roboto, Open Sans) for long-form content.
 - **Imagery:** Use **high-quality, professional photography** or sleek, modern illustrations. Avoid generic stock photos. Focus on images that convey your team's personality, the results of your work, or a metaphorical representation of your process.
-

Required Website Pages & Full Detail

1. Home Page (The Introduction)

- **Goal:** Quickly hook the visitor and direct them to the most relevant area (Services or Portfolio).
- **Key Sections:**

- **Hero Section:** A powerful, concise **Headline** (e.g., "Digital Growth, Simplified.") and a compelling **Sub-headline** describing *what* you do and *who* you serve.
- **Primary CTA:** A prominent button (e.g., "**Start Your Project**" or "**View Services**") placed high on the page.
- **Social Proof:** A horizontal section displaying logos of recognizable past clients or industry awards/press mentions.
- **Snapshot of Services:** 3-4 simple icons/cards briefly outlining your core offerings.
- **Mini Portfolio/Case Study:** One visually impressive project with a strong result (e.g., "Increased conversion by 45%").
- **Brief 'About Us' Pitch:** A small paragraph establishing your unique philosophy or approach.

2. Services / Products Page (What You Offer)

- **Goal:** Detail your offerings clearly, establishing value and expertise.
- **Design Style:** Use a **card-based layout** or a multi-column grid.
- **Key Sections:**
 - **High-Level Overview:** Group services logically (e.g., "Web Design," "Branding," "SEO").
 - **Product/Service Detail:** Each service should have its own dedicated section or sub-page featuring:
 - **Headline:** Clear and results-focused (e.g., "High-Converting E-commerce Design").
 - **Problem/Solution:** Briefly describe the common client problem you solve.
 - **Process Breakdown:** 3-5 steps outlining how you deliver the service (e.g., Discover, Design, Develop, Deploy).
 - **Pricing/Tiering:** If you offer packages, use a **comparison table** to show tiers (Basic, Pro, Enterprise) clearly.
 - **Service-Specific CTA:** (e.g., "Get a Quote for this Service").

3. Portfolio / Case Studies Page (Proof of Work)

- **Goal:** Showcase tangible results and your quality of work. This is one of the most important pages.
- **Design Style:** A **filterable grid** or mosaic layout. Use large, high-resolution hero images for each project.
- **Key Sections:**

- **Project Filter:** Allow visitors to filter by service (e.g., "Websites," "Rebrands," "Content").
- **Individual Case Study (Template):** Each project should have a dedicated page using this structure:
 - **Challenge:** The problem the client came to you with.
 - **Solution:** Your strategy and execution.
 - **Results: Quantifiable metrics** (e.g., "25% increase in traffic," "120% ROI").
 - **Visuals:** Before-and-after screens, sketches, or final product images.
 - **Testimonial:** A direct quote from the client.

4. About Us Page (The Team & Story)

- **Goal:** Humanize your brand and build rapport.
- **Key Sections:**
 - **Our Story/Philosophy:** Explain *why* you started and *what* drives your work.
 - **The Team:** High-quality, professional headshots of key personnel. Brief, personal bios that convey expertise and personality.
 - **Core Values:** 3-5 bullet points defining your commitment (e.g., Transparency, Innovation, Impact).
 - **Process Overview:** A visual flow chart or 3-step graphic explaining your client journey.

5. Contact Page (The Gateway)

- **Goal:** Make it dead simple to get in touch.
- **Design Style:** See the dedicated section below.
- **Key Sections:**
 - **Contact Form:** Simple and efficient.
 - **Alternative Contact Info:** Email address, phone number (if applicable), and physical address/map.
 - **Initial Consultation CTA:** A clear invitation to book a call or meeting.

Contact Page Design & Style

The Contact Page should be **uncluttered and action-oriented**.

1. **Layout:** Use a **split-screen layout**.
 - **Left Side:** A sleek, minimal contact **form**.
 - **Right Side:** **Key contact information** and a strong, friendly headline (e.g., "Ready to Elevate Your Brand?").
2. **Contact Form Design:**
 - **Simplicity:** Only ask for **Name, Email, and a Message**. You can add a single dropdown for "Project Type" (e.g., "New Website," "Branding," "Consultation") to help qualify leads.
 - **Placeholder Text:** Use helpful, light gray text inside the fields (e.g., "Tell us about your project goals and budget...").
 - **The Button:** The form submission button must be your **accent color** and include a clear, action-oriented phrase like **"Send My Inquiry"** or **"Start the Conversation."**
3. **Map Integration:** Embed a simple, clean map (Google Maps) showing your office location if you have one.
4. **Privacy Note:** A very small line of text assuring users that their information is safe and private.

This structure leverages file-system routing and React Server Components for better performance and organization.

Here is a detailed, organized directory structure tailored to the pages and components you'll need for your agency site:

Next.js Directory Structure (App Router)

We will use the recommended approach of wrapping the application code in a src directory for better separation from configuration files.

Root Level (/)

Folder/File	Purpose	Notes
src/	Application Source Code	Contains all the main logic,

		routes, components, etc.
public/	Static Assets	Images (/public/images/), fonts, favicon.ico, sitemap.xml, robots.txt.
.env.local	Environment Variables	API keys, secret tokens, etc. (Not committed to Git).
next.config.js	Next.js Configuration	Custom headers, image optimization domains, etc.
tailwind.config.ts	Styling Configuration	If using Tailwind CSS (highly recommended).
package.json	Project Metadata	Dependencies and scripts.

Inside src/ (The Core)

This is where you centralize shared code that isn't directly a route or an asset.

Folder	Purpose	Example Contents
components/	Reusable UI Components	The building blocks of your site. Divided into smaller groups.
lib/	Utility & Backend Logic	Functions that fetch data, handle external APIs, and business logic.
hooks/	Custom React Hooks	Reusable logic for state, side effects, etc. (e.g., useScrollDirection.ts).
styles/	Global Styles	Your main CSS files or

		Tailwind imports (e.g., globals.css).
types/	TypeScript Definitions	Shared interfaces and types (e.g., Service.ts, CaseStudy.ts).
app/	Routing and Pages	This is the core of Next.js routing. The structure here defines your URL paths.

Inside src/components/ (Component Organization)

A flat structure for smaller sites, or a categorized structure for larger ones.

Folder	Purpose	Example Components
ui/	Basic, Reusable Primitives	Simple, presentational components with no business logic.
layout/	Structural Components	Components that define the shell of a page.
sections/	Page-Specific Sections	Larger blocks used to compose the main pages.
case-studies/	Feature-Specific Components	Components unique to the Portfolio page/feature.

Inside src/app/ (Routing)

This structure is organized based on the website pages defined earlier. Folders map to URL

paths, and the special file page.tsx defines the content for that route.

Path/File	Corresponds to URL	Purpose (Routing)
layout.tsx	/	Root Layout (Global Navigation & Footer). Wraps all pages.
page.tsx	/	Home Page Content (src/app/page.tsx).
services/	/services	Group for all services-related content.
services/page.tsx	/services	The main Services Overview page.
services/[slug]/page.tsx	/services/web-design	Dynamic Route for individual Service pages (uses slug).
portfolio/	/portfolio	Group for all case studies/work.
portfolio/page.tsx	/portfolio	The main Portfolio/Case Studies index page.
portfolio/[slug]/page.tsx	/portfolio/client-a-case-study	Dynamic Route for individual Case Study detail.
about/	/about	Group for About Us content.
about/page.tsx	/about	The main About Us page.
contact/	/contact	Group for the Contact page.

contact/page.tsx	/contact	The main Contact page.
(legal)/	/privacy, /terms	Route Group (The parenthesis don't appear in the URL).
(legal)/privacy/page.tsx	/privacy	Privacy Policy page.
(legal)/terms/page.tsx	/terms	Terms of Service page.
not-found.tsx	(Any non-existent URL)	The custom 404 Page UI.

Private Folders for Colocation (Optional, but Best Practice)

You can place feature-specific components and helper files *next* to the routes that use them by prefixing the folder with an underscore (_). This is called **Colocation** and is a key App Router best practice.

- src/app/portfolio/_components/CaseStudyCard.tsx
- src/app/services/_lib/data-fetchers.ts

This keeps related logic and UI close together, making the code much easier to navigate and maintain!

This structure provides the clean separation and maintainability required for a professional agency site built with Next.js.
